

## THE GLOBAL WARMING TEST

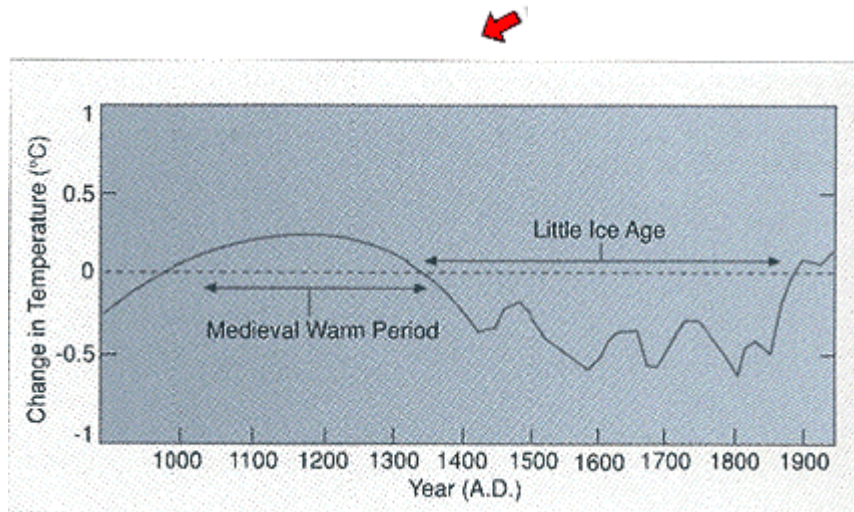

### Question 8:

Which answer below provides the best explanation for the following temperature record?

- Industrial pollution from factories, power plants, and cars caused global warming
- Natural variations in global temperatures may occur in roughly 500-years cycles
- Global cooling occurred as a result of the Renaissance Period

**Sorry...that is incorrect.**

Some of the warmest temperatures in the last 2000 years occurred during the Medieval Warm Period from 1000 to 1350 AD. Clearly industrial pollution was not the cause.
